

FOR IMMEDIATE RELEASE

### **Security MicrolMAGING Appointed to Integrate Document Solution for Synergy Health**

Milwaukee, WI August 8, 2006 – Security MicrolMAGING has been awarded a contract to develop and integrate a document management system for SynergyHealth. As a leading provider of Enterprise Content Management, Security MicrolMAGING has chosen to implement Hyland Software's OnBase to capture, index, and store all SynergyHealth's explanation of benefits statements. In addition to increased efficiency of records retrieval and enhanced customer service, this process will save an immense amount of space required to physically store all the statements that are generated by the 72 physicians providing quality care throughout its 12 medical facilities.

According to SynergyHealth's president and CEO, Gregory Banaszynski, "SynergyHealth is leading the way in Southeastern Wisconsin with the implementation of a new electronic medical record system that will provide seamless access to patient information at the hospital and any of our clinic locations." This availability of records will also extend to insurance documentation. "Advancing quality care' is SynergyHealth's motto and it is obvious to us that SynergyHealth is also devoted to advancing their technology to reap the benefits of digital versus paper processing in their daily operations," states Chris Maertz, Chief Solution Architect for Security MicrolMAGING.

Security MicrolMAGING looks forward to developing and maintaining a successful, long-term business relationship with SynergyHealth to help them achieve their operational and service objectives.

### **About Security MicrolMAGING**

Security MicrolMAGING provides vision, development, and implementation of a full spectrum of innovative, results-driven content management processes and tools to enterprises striving for optimal business performance. Security MicrolMAGING serves as a respected source for capturing, managing, distributing, archiving, and securing information; providing enterprise content management software and hardware; and supplying back office support for document and data conversion services in both digital and analog formats.
