

FOR IMMEDIATE RELEASE

Security MicroImaging Selected by Magellan Health Services to Integrate Document Management Solutions

MILWAUKEE, March 18, 2009 – Security MicroImaging has been awarded a contract totaling \$650,000+ to develop and integrate a document management system for Magellan Health Services. As an award-winning provider of Enterprise Content Management, Security MicroImaging has chosen to implement Hyland Software's OnBase into Magellan's physician credentialing to streamline costs, enhance productivity, and increase compliance.

Magellan's physician credential system will include numerous OnBase workflow modules that will complement its current IT investments and Microsoft SharePoint. Once fully implemented, Magellan's system will enable automated licensing, credentialing and recredentialing notifications be sent and tracked to ensure up-to-date credentialing for the organization's 74,000 affiliates, located throughout the country. This credentialing process will enable Magellan to meet and exceed the highest of compliance standards for credentialing as well as retain its reputation of providing ethical, state-of-the-art services to its client base all while minimizing labor and human error.

Security MicroImaging selected OnBase for Magellan based on its solid track record servicing over 700 healthcare organizations and also its scalable and modular architecture that enables organizations to deploy solutions at the department and enterprise-level. Organizations can select functionality that suits their needs today but allows them to expand incrementally and to cost-effectively expand and enhance the system as needs grow.

Magellan Health Services is the country's leading diversified specialty health care management organization, with a network of highly qualified, trained behavioral health professionals and facilities throughout the U.S. Magellan behavioral health providers are licensed and credentialed to high industry standards and have documented experience in a variety of behavioral health issues. Magellan's credentialing process is among the most rigorous in the industry. Each of their network providers are required to undergo initial credentialing verification prior to being accepted into the network and then regularly undergo recredentialing to make sure they are offering members quality providers.

Security MicroImaging looks forward to developing and maintaining a successful, long-term business relationship with Magellan to help them achieve maximized operational effectiveness.

About Security MicroImaging

Security MicroImaging provides vision, development, and implementation of a full spectrum of innovative, results-driven content management processes and tools to enterprises striving for optimal

business performance. Security Microlmaging serves as a respected source for capturing, managing, distributing, archiving, and securing information for a solid network of clients including Brookdale Senior Living, Oconomowoc Residential Programs, and Sister of St. Francis Health Services.
